APPLICATION EVIDENCE

A human still owns the source question

ACCOUNTABILITY QUESTION

Structured returns do not remove the source question.

Which source supports this reported field?

Statements, ledgers and schedules can disagree or leave evidence missing.

The operator, buyer, frequency, pain and willingness to pay remain unvalidated.

DRR targets submission; evidence starts upstream

DRR

Structured reporting channels, validation
and submission infrastructure

Public absence is not proof.

ATTEST

Provider-neutral source references,
disagreement and human review

No filing. No DRR connection. No claimed gap.
